Grid-enabled Social Science

Yuwei Lin

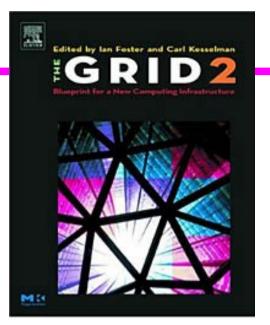

ESRC National Centre for e-Social Science
University of Manchester
http://www.ncess.ac.uk

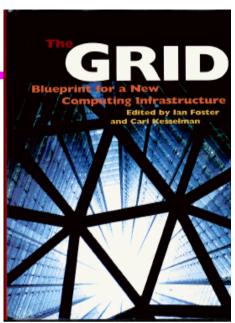

What is Grid?

- Computational Grid
- Data Grid
- Collaboration Grid
- Sensor Grid

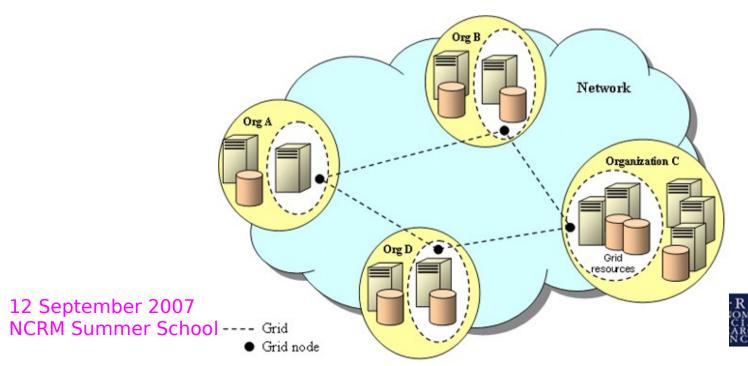

• In short, grid is utilisation of widely distributed computing resources, storage facilities and networks owned by different organisations but used by individuals who are not necessarily a member of that organisation (Foster & Kesselman, 1999)

The collaborative nature of Grid

- Grid Resource Allocation is complex:
 - Resources belong to different domains
 - Resources are subject to different policies
 - Resources are geographically distributed
- Sharing of resources among institutions

Mixed Methods (1)

- Digital Records
 Node (Nottingham)
- Digital Replay
 System: combining
 and replaying
 digital records
 side-by-side
- Video annotation

Representing molti-modality of data

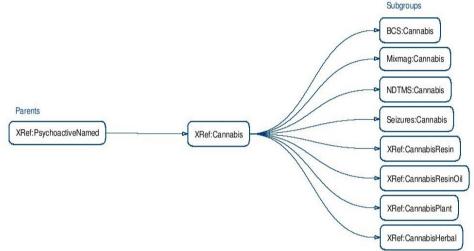

Mixed Methods (2)

- Head Talk Small Grant Project (Nottingham)
- dealing with multimodal corpus
- linguistic coding of verbal and nonverbal backchannels

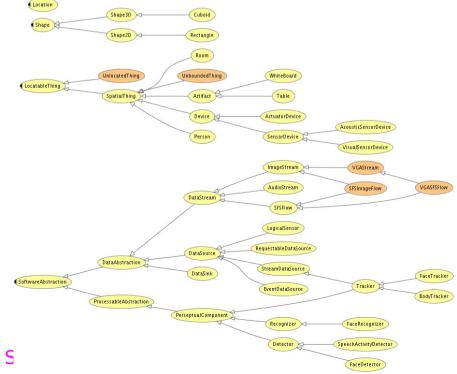

Data Discovery (1)

 The Data Chronicles (Manchester): A Repository for Drug Survey Metadata

Creation of Multiple Ontologies

Data Discovery (2)

- PolicyGrid Node (Aberdeen)
- Semantic Grid Tools for facilitating evidence-based rural, social, and land-use policymaking through integrated analysis of mixed data types

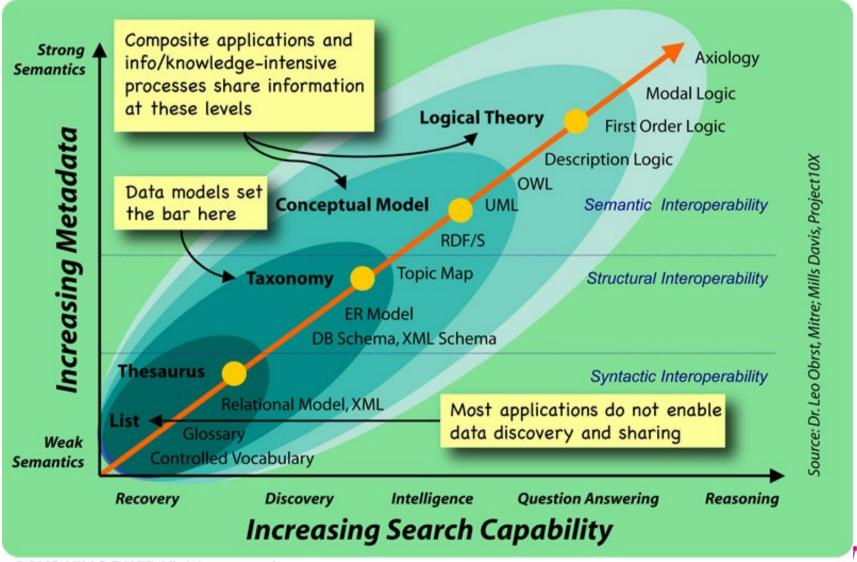

Ontologies and data integration

Semantic Data Discovery

Modelling and Simulation (1)

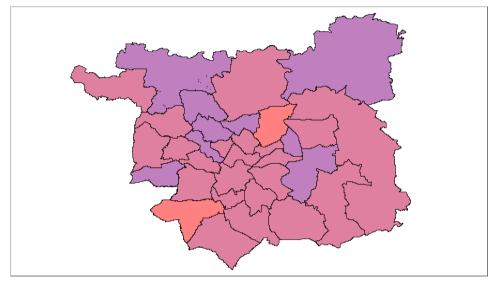

- Modelling and Simulation for e-Social Science (MoSeS) (Leeds)
- represent and forecast the UK population at spatial level
- massive data resources and computing power

- To investigate
 scenarios which
 relate demographics
 to service provision
 - with particular emphasis on policy applications within the health, transport and fiscal policy sectors

Modelling and Simulation (2)

Diabetes 2005

Diabetes 2030

- Data-driven & evidence-based
- Challenges: Restricted access to patient data and privacy issues

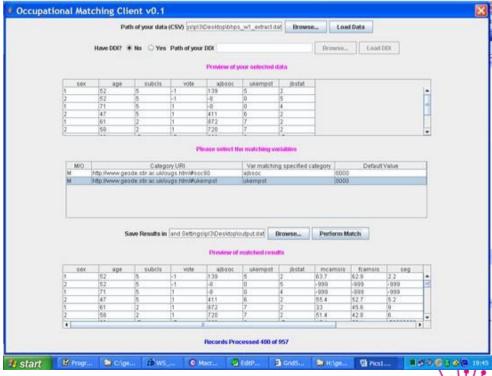

Data linkage

Grid Enabled
 Occupational Data
 Environment (GEODE)

(Uni of Stirling)

 A Grid enabled internet portal to facilitate the processing of occupational data from social survey and related outputs

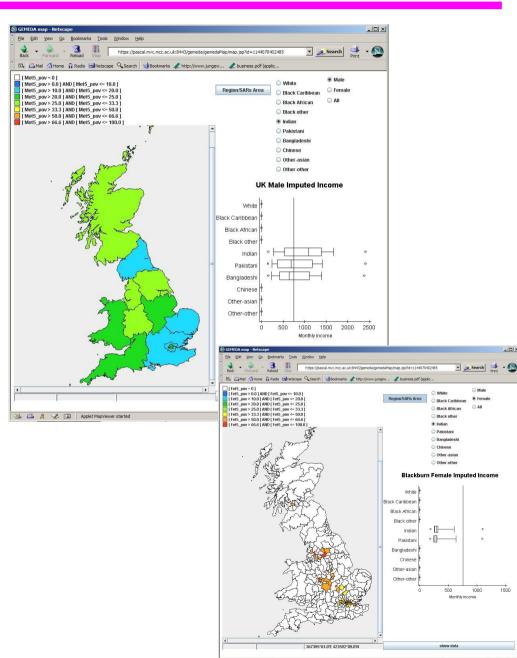

Data linkage and visualisation

- Grid-enabled micro econometric Data Analysis (GEMEDA) (Manchester)
- Data sources: British Household Panel Survey (BHPS) & UK Census' Samples of Anonymised Records (SARs)
- web-based service: access through browser light client

Data linkage and representation

- Geographic Virtual Urban Environments (GeoVUE) (UCL Centre for Advanced Spatial Analysis)
- visualise publicly available data using 2D, 3D and CAD

Animating pollution trails in Google Maps

The Google Map Creator - a freeware designed to make thematic mapping using Google Maps simpler.

Why e-Social Science?

- improved access
- better distributed collaboration
- linked data for richer results
- save time

- But, this talk is not to impose or preach to convert.
- parallel development at NCRM
- Mutual learning and community building
